

EVOLUTION HAS COME

EVOLUTION 2

NEW INNOVATIVE BODY COATING TECHNOLOGY

Special gas body coating:

- technology developed in a Polish institute
- firm layer increasing body stiffness
- micron-thin layer
- lower friction
- increased life

EVOLUTION HAS COME...

FABA

EVOLUTION 2

SUPERB MULTI-RIP SAW BLADES

In order to meet growing customers' expectations **FABA** engineers designed a new line of multi-rip saw blades. Years of experience in production of saw mill blades working in extreme conditions with high feed speed allowed for creating a saw blade with excellent work performance. The saw blades have been designed to optimize their efficiency with keeping the requested cutting quality high.

The new **EVO2** series saw blades mean new body coating, the new **FABA** quality.

The **EVO2** saw blades, precisely designed in cooperation with a scientific institute are manufactured in a new body coating technology which significantly improves work in hard conditions. The new coating covering the whole body surface has lower friction coefficient which stops resin from sticking to the body – it is especially important when working with resinous wood (pine, spruce, larch).

EVO2 multi-rip saw blades are dedicated both for saw mills and palette producers as well as for more demanding clients, expecting very accurate and precise material cutting.

EVO2 saw blades are the new **FABA** quality.
